## Abstracts

To address issues such as inconsistent colors in production processes, deviations in the implementation of design concepts, and difficulties in cross-media color communication, color matching services have emerged. Since the maturity and commercialization of computer-aided color measurement and matching technology in the late 20th century, the field of color management and quality control has entered a new digital phase. Currently, color matching services have developed into a multi-technology system encompassing spectrophotometer testing, digital chromatographic library establishment, and spot color formulation development. Widely applied in textiles and apparel, printing and packaging, automotive painting, and digital media, these services achieve accurate color reproduction across materials and processes through scientific data collection and analysis, significantly improving product quality, reducing rework rates, and ensuring brand visual consistency.
