## Abstracts

A Color RGB Line Scan Camera is an imaging device that utilizes line scan technology to capture high-precision color images using three separate channels: Red (R), Green (G), and Blue (B). These cameras typically employ three-line CMOS or CCD sensors, with each scanning line corresponding to a specific color channel, ensuring superior color accuracy and image clarity. Compared to monochrome line scan cameras, RGB line scan cameras are ideal for applications requiring high resolution and precise color differentiation, such as print inspection, textile inspection, food sorting, semiconductor inspection, and industrial quality control. Additionally, some RGB line scan cameras support multispectral or near-infrared (NIR) channels to meet specialized application requirements.

The global Color RGB Line Scan Camera market size was estimated at USD 253.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.90% during the forecast period.
