Abstracts

Colored low melting fiber is a synthetic fiber that incorporates pre-dyed pigments during manufacturing while maintaining a low melting point (typically 130°C to 200°C). Made from materials like polyester (PET) or polypropylene (PP), it enables thermal bonding in nonwoven fabrics without the need for additional dyeing processes. This enhances color consistency, environmental sustainability, and production efficiency by reducing water and chemical usage. These fibers are widely used in automotive interiors, textiles, carpets, and filtration media, offering vibrant, long-lasting color, softness, and durability while supporting eco-friendly and cost-effective manufacturing.

The global Colored Low Melting Fiber market size was estimated at USD 696.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.20% during the forecast period.
