## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Colored Polyethylene Fibers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Colored Polyethylene Fibers are synthetic fibers made from polyethylene as the basic raw material, which are colored through specific coloring processes. Polyethylene is a high molecular weight polymer polymerized from ethylene monomers, which has good chemical stability, corrosion resistance, electrical insulation, as well as high strength and toughness. Colored polyethylene fibers retain the original advantages of polyethylene fibers and do not require further dyeing processing due to their inherent color, simplifying the production process and reducing environmental pollution caused by dyeing.

The global Colored Polyethylene Fibers market size was estimated at USD 658.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
