Abstracts

A colour and dirty collector, also referred to as a lint or colour catcher, is a specialized laundry product designed to absorb and trap loose dyes, lint, and dirt released during the washing process, thereby preventing colour bleeding, fabric discolouration, and residue accumulation on other garments or the washing machine drum. Typically constructed from highly absorbent, non-woven materials or cellulose-based sheets infused with colour-grabbing compounds, these products function by attracting and retaining free-floating particles in the wash water. They are used primarily in mixed laundry loads to maintain garment vibrancy, extend fabric life, and reduce cross-colour contamination, offering a practical solution for consumers seeking to protect clothing investments and simplify laundry care without the need for sorting by colour.

The global Colour And Dirty Collector market size was estimated at USD 145.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
