Abstracts

Column Bioimpedance Analyzers (BIA) are medical or health assessment devices that measure the electrical impedance of body tissues to estimate body composition, including fat mass, lean mass, total body water, and extracellular/intracellular fluid distribution. These devices typically use a tetrapolar or multi-frequency approach, sending a low-level electrical current through the body via electrodes and measuring resistance and reactance to derive compositional metrics. Column-style BIAs are often designed as freestanding or integrated units in clinical, research, or fitness settings, providing non-invasive, rapid, and relatively low-cost analysis compared to more advanced methods like DXA or MRI. They are widely used for nutritional status evaluation, fitness monitoring, geriatric care, and chronic disease management.

The global Column Bioimpedance Analyzer market size was estimated at USD 120.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
