Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Column Internals competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Column Internals are core internal components in chemical/petroleum refining towers (such as distillation towers and absorption towers) to enhance gas-liquid mass transfer efficiency and separation accuracy. They increase the gas-liquid contact area (typical specific surface area 500-1500 m²/m³) through specific structures (such as packing layers and plate holes); the design pressure drop range is 50-500 Pa/m, balancing separation efficiency and energy consumption (such as random packing pressure drop
