## Abstracts

The Combined Charging System (CCS) is an international standard for electric vehicle (EV) charging that integrates AC (Alternating Current) and DC (Direct Current) charging capabilities into a single, unified connector, enabling both slower home or public AC charging and rapid DC fast charging at dedicated stations. Developed through collaboration among major global automakers and standard-setting bodies, CCS incorporates the Type 1 (Combo 1) connector primarily used in North America and the Type 2 (Combo 2) connector common in Europe and other regions, supporting power levels from standard 7.22 kW AC up to 350 kW or higher DC, making it a versatile solution for a broad range of EVs from compact cars to commercial vehicles. Designed with future scalability in mind, CCS supports advanced features such as bi-directional charging (V2G/V2H), enhanced communication protocols for smart grid integration, and compatibility with renewable energy systems, positioning it as a foundational technology for the evolving EV ecosystem and the broader transition to sustainable transportation infrastructure.

The global Combined Charging System market size was estimated at USD 12500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 22.50% during the forecast period.
