The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Combined Type Needle Roller Bearings competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Combined type needle roller bearing is a structural design that combines radial needle roller bearings with axial thrust components, capable of bearing radial and axial loads in a single compact bearing unit. The radial force is usually carried by a needle roller assembly with a cage, combined with a thrust ball or cylindrical roller bearing to bear the axial force. It is suitable for systems with limited space and complex load directions, such as transmission shafts, machine tool spindles, textile machinery and industrial robots. This type of bearing solves the problem of requiring multiple locating bearings in traditional bearing design, simplifies the structural design and improves the rigidity and stability of the system.

The global Combined Type Needle Roller Bearings market size was estimated at USD 1247.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
