Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Combo PON Optical Module competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The Combo PON optical module is an optical transceiver module that supports multiple passive optical network standards such as GPON and XG-PON. It can achieve multi-standard compatibility on the same optical port, reduce network construction costs and facilitate smooth upgrades for operators. It is mainly used in telecom operators' fiber optic access, data center access and smart city networks. Global sales in 2024 will be approximately 7.2 million units, the average unit price in 2024 will be approximately US\$95, and the single-line production capacity will be approximately 200,000 units. Upstream companies are mainly optical chip manufacturers, optical device manufacturers and packaging and testing companies, and downstream companies are mainly telecom operators, data center builders and system integrators. The gross profit margin is approximately 55%. Combo PON optical modules, with their compatibility with multiple PON standards, are becoming a mainstream choice for access network upgrades. As global operators accelerate their transition to 10G PON, Combo modules can simultaneously support GPON, XGS-PON, and 10G-PON on the same device, providing operators with a flexible network evolution path and investment protection. Especially in FTTH and 5G backhaul scenarios, Combo modules effectively reduce total cost of ownership by simplifying network architecture and reducing operation and maintenance complexity. Although facing short-term chip supply constraints and cost pressures, Combo PON optical module prices will gradually decline as technology matures and production capacity expands, and market penetration is expected to further increase. In the future, in emerging areas such as smart buildings and the Industrial Internet, Combo modules, with their multi-service carrying capabilities,

will become a key enabling technology, driving the development of access networks towards higher bandwidth and more intelligent networks.

The global Combo PON Optical Module market size was estimated at USD 684.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.90% during the forecast period.
