Report Overview

The combustible gas alarm controller is a device used to monitor and alarm the concentration of combustible gas. It is commonly used in industrial, commercial, and residential locations, as well as in hazardous environments such as chemical plants, petrochemical plants, and coal mines. Combustible gas alarm controllers usually consist of sensors, controllers and alarms. The sensor is responsible for detecting the concentration of combustible gases in the air and converting the detection results into electrical signals and sending them to the controller. The controller is responsible for receiving the sensor signal and judging and processing it according to the preset threshold. Once the combustible gas concentration is detected to exceed the set threshold, the controller will trigger the alarm to send out a sound or light signal to alert people of possible gas leaks and fire risks. The combustible gas alarm controller can monitor a variety of combustible gases, such as natural gas, liquefied petroleum gas, methane, ethane, propane, etc. It has the characteristics of high sensitivity, quick response, and high reliability. It can detect gas leaks and fire risks in time and help people take timely measures to prevent accidents.
