Abstracts

The turbofan or fanjet is a type of airbreathing jet engine that is widely used in aircraft propulsion. The word 'turbofan' is a portmanteau of 'turbine' and 'fan': the turbo portion refers to a gas turbine engine which achieves mechanical energy from combustion,[1] and the fan, a ducted fan that uses the mechanical energy from the gas turbine to accelerate air rearwards. Thus, whereas all the air taken in by a turbojet passes through the turbine (through the combustion chamber), in a turbofan some of that air bypasses the turbine.

The global Commercial Aero Turbofan Engine market size was estimated at USD 19870.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.06% during the forecast period.
