### Report Overview:

Human machine interfaces (HMIs) are used as an operator control panel to PLCs, RTUs, and in some cases directly to IEDs. HMIs replace manually activated switches, dials, and other controls with graphical representations of the control process and digital controls to influence that process. HMIs allow operators to start and stop cycles, adjust set points, and perform other functions required to adjust and interact with a control process. Because the HMI is software based, they replace physical wires and controls with software parameters, allowing them to be adapted and adjusted very easily.

This report does not include products for the consumer electronics sector.

The Global Commercial Human Machine Interface (HMI) Market Size was estimated at USD 479.60 million in 2023 and is projected to reach USD 576.01 million by 2029, exhibiting a CAGR of 3.10% during the forecast period.
