Abstracts

Commercial microinverters are miniaturized power electronic devices that are mainly used to convert direct current generated by photovoltaic modules into alternating current. They are suitable for distributed solar power generation systems in commercial buildings and industrial sites. Unlike traditional centralized inverters, each microinverter is paired with a solar panel one by one to achieve independent power conversion and optimized management, thereby improving system efficiency, reducing the impact of local shading or failures, enhancing power generation performance, and facilitating maintenance and monitoring.

The global Commercial Micro Inverters market size was estimated at USD 1355.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.10% during the forecast period.
