MVHR (Mechanical Ventilation with Heat Recovery) provides fresh filtered air into a building whilst retaining most of the energy that has already been used in heating the building. Heat Recovery Ventilation is the solution to the ventilation needs of energy efficient buildings. Mechanical ventilation with heat recovery (MVHR), heat recovery ventilation (HRV) or Comfort ventilation are all names for the same thing. A heat recovery ventilation system properly fitted into a house provides a constant supply of fresh filtered air, maintaining the air quality whilst being practically imperceptible. Government Incentives and Policies: Various government incentives, tax credits, and policies promoting the adoption of renewable and energy-efficient heating solutions encourage homeowners to invest in heat recovery systems. Rising Energy Costs: Increasing energy costs prompt homeowners to seek energy-saving solutions. Heat recovery systems provide a way to recover and reuse heat, thereby reducing energy bills and overall heating costs.

The global Commercial Use Mechanical Ventilation with Heat Recovery (MVHR) Units market size was estimated at USD 848.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.30% during the forecast period.
