## Abstracts

Stone plastic composite (SPC), or solid polymer core, is a type of rigid core used in vinyl flooring that is comprised of mostly limestone with a mix of polyvinyl chloride and stabilizers. Rigid cores like SPC are used in modular vinyl flooring to provide dimensional stability and rigidity. **Market Drivers:** Durability and Longevity: Commercial SPC flooring is known for its high durability and resistance to wear and tear, making it suitable for high-traffic areas in commercial settings, such as retail stores, offices, and hospitality spaces. **Water Resistance:** SPC flooring is waterproof, making it an attractive choice for commercial spaces, including bathrooms, kitchens, and areas prone to spills and moisture. **Design and Aesthetics:** SPC flooring comes in a wide range of designs, including wood and stone patterns, allowing businesses to achieve a desired aesthetic while benefiting from its durability. **Installation Efficiency:** The click-lock installation system of SPC flooring simplifies the installation process, which can be a cost-saving factor for commercial projects. **Market Restrictions:** Competition: The commercial flooring market is highly competitive, with numerous options available, including traditional materials like hardwood, ceramic tile, and carpet, which can make it challenging for SPC flooring to gain market share. **Initial Cost:** While SPC flooring can offer long-term cost savings due to its durability and low maintenance, the upfront cost of materials and installation may be higher than some other flooring options.

The global Commercial Use Stone Plastic Composite (SPC) Flooring market size was estimated at USD 976.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 15.00% during the forecast period.
