## Abstracts

The commercial vehicle non-constant velocity drive shaft is a component used in the automotive transmission system, mainly used to transmit power and torque. It connects the transmission and the drive axle through a universal joint, and can maintain the stability and reliability of power transmission under various road conditions. The main feature of the non-constant velocity drive shaft is that its universal joint has obvious elasticity in the torsion direction, which can maintain power transmission when the angle changes, but the angular velocity is not equal. Because it can maintain stable power transmission under various road conditions, it is particularly suitable for working conditions that need to withstand large loads and changes.

The global Commercial Vehicle Non-constant Velocity Drive Shaft market size was estimated at USD 994.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
