Report Overview

Vehicle sensors are the input devices of the automobile computer system. It converts various operating conditions of the automobile, such as vehicle speed, temperature of various media, and engine operating conditions, into electrical signals and sends them to the computer so that the engine is at its best Working status. There are many automotive sensors. When judging the fault of the sensor, you should not only consider the sensor itself, but the entire circuit where the fault occurs. Therefore, when troubleshooting, in addition to checking the sensor, the wiring harness, connectors, and related circuits between the sensor and the electronic control unit should also be checked.
