Abstracts

Wagyu is a breed of cattle native and unique in their genetics to Japan. There are three most famous breeding strains ? Tajima from Hyogo Prefecture, Itozakura from Shimane Prefecture, and Kedaka from Tottori Prefecture ? in Japan. Wagyu beef is highly marbled, meaning that the muscle is finely interspersed with monounsaturated fat. This marbling gives the beef its "melt in the mouth" moisture and tenderness. When cooked, the marbling is absorbed into the muscle and gives the meat its tenderness and flavour. Wagyu fat has a better flavor and lower melting point than fat in common beef cattle. Further, it contains oleic acid that is considered good for the heart, and it has the lowest cholesterol levels when compared to other red meats, fish, and chicken. Wagyu beef also resembles olive oil and salmon in terms of health benefits due to its high marbling. Global key players of Commercial Wagyu Beef include Itoham Foods Inc., Starzen Co., Ltd., Australian Agricultural Company (AACo), Rangers Valley, Stone Axe Pastoral Company, etc. The top five players hold a share about 54%. Asia-Pacific is the largest market, and has a share about 81%, followed by North America and Latin America with share 11% and 3%, separately. In terms of product type, Fullblood Wagyu is the largest segment, occupied for a share of 65%. In terms of application, Retailers has a share about 52 percent.
