Abstracts

Content creation services refer to businesses, brands, or individuals outsourcing the creation and design of content for specific purposes to professional agencies, studios, or freelancers. These services cover a wide range, including but not limited to brand visual identity design, marketing copywriting, user experience (UX) content design, educational material production, and the customization and optimization of AIGC (artificial intelligence-generated content). The core value of these services lies in providing clients with professional, high-quality, and efficient customized content to achieve specific business goals (such as increasing brand awareness, boosting product sales, optimizing user experience, or achieving educational communication). The commissioned content design market is experiencing explosive growth, primarily driven by the comprehensive and in-depth adoption of digital marketing by global enterprises and the widespread application of AIGC (AI-Generated Content) technology. Businesses require a large volume of high-quality, multi-channel content to attract and retain clients, but often lack in-house professional design and content creation teams. While AIGC technology improves content production efficiency, the optimization of content creativity, style consistency, and compliance still requires professional human intervention. Therefore, market demand is shifting towards advanced content design agencies capable of integrating AI tools and providing "AI + human optimization" services. The current competitive focus has shifted from single content production capabilities to integrated design capabilities across media and platforms, and the digital management of design assets. Clients are seeking service providers who can not only produce beautiful content but also ensure its consistency and effectiveness across different channels (such as websites, social media, and apps). The future trend is for service providers to combine content design with brand digital asset management (DAM) systems and user behavior data analysis to provide quantifiable and traceable *****content effectiveness optimization**** services, rather than simply delivering design

files.

The global Commissioned Content Design Services market size was estimated at USD 1474.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
