Report Overview

A common cathode rectifier diode array is an electronic device that usually consists of multiple diodes connected with a common cathode. Each diode has a common cathode connection, while individual anodes are connected to different output terminals. This array is designed so that it can be used in a circuit as a rectifier for converting an AC signal to a DC signal. Common-cathode rectifier diode arrays are commonly used in applications such as power circuits, inverters, frequency converters, and motor drives to rectify, filter, and stabilize the supply voltage. It can effectively convert the negative half cycle or positive half cycle of the AC signal into a DC signal, so as to provide a stable DC power supply for the subsequent circuit. A common common-cathode rectifier diode array consists of multiple diodes packaged on the same chip, usually in a small plastic or ceramic package. Common-cathode rectifier diode array features include high efficiency, fast response, and low reverse leakage current.

The global Common Cathode Diode Array Rectifier market size was estimated at USD 1250.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
