## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Common Mode Line Filter competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Common-mode line filters are electronic components used to suppress common-mode noise on power lines or signal lines. Through designs such as ferrite cores, bifilar winding structures, or RC networks, they use magnetic coupling or capacitor-resistor combinations to achieve high-impedance suppression of common-mode interference while maintaining low-loss transmission of differential-mode signals. They are widely used in communication equipment (such as 5G base stations), consumer electronics (such as USB interfaces), industrial control (PLC/servo drives), and new energy vehicles (on-board chargers).

The global Common Mode Line Filter market size was estimated at USD 105.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
