Abstracts

The power supply system of a communication base station is a dedicated power supply system that provides stable and uninterrupted power to all core equipment within the base station (such as signal transceiver equipment, data processing units, and cooling systems). It is the "power core" that ensures the base station's 24-hour uninterrupted operation and directly determines the coverage quality and stability of the communication signal. The price of a communication base station power system varies widely depending on the type, configuration, and functionality. Basic rectifier modules typically cost between \$50 and \$500 each; integrated outdoor power cabinets for micro base stations typically cost between \$150 and \$200. A complete macro base station system with energy storage typically costs between \$750 and \$2000 for a lead-acid battery configuration, while lithium batteries, due to their higher energy density, can cost thousands of dollars. Large-scale off-grid or containerized energy storage power systems can cost tens of thousands of dollars, depending on factors such as storage capacity and adaptability to new energy sources.

The global Communication Base Station Power Systems market size was estimated at USD 3172.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
