## Abstracts

A Compact EMC (Electromagnetic Compatibility) Chamber is a specialized, enclosed testing facility designed to evaluate the electromagnetic compatibility characteristics of electronic devices and systems. It is engineered to create a controlled electromagnetic environment within a relatively small and confined space. These chambers are equipped with various shielding materials and technologies to block external electromagnetic interference from affecting the tests and to contain the emissions from the device under test. They typically feature absorptive materials on the interior surfaces to minimize internal reflections and provide accurate measurement of electromagnetic emissions and susceptibility, enabling precise assessment of how a device will perform in real-world electromagnetic conditions, and are widely used in electronics manufacturing, research, and development to ensure compliance with relevant electromagnetic compatibility standards.

The global Compact EMC Chamber market size was estimated at USD 2154.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.60% during the forecast period.
