Compact fluorescent tubes (CFTs) are energy-efficient lighting devices that consist of a gas-filled glass tube coated with phosphor and equipped with an integrated or external electronic ballast; they function by using an electric current to excite mercury vapor, which produces ultraviolet light that then causes the phosphor coating to emit visible light, offering a longer lifespan and lower energy consumption compared to traditional incandescent or older fluorescent lighting technologies, making them suitable for a variety of residential, commercial, and industrial applications where reduced electricity costs and environmental impact are prioritized.

The global Compact Fluorescent Tube market size was estimated at USD 1125.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of -3.25% during the forecast period.
