Abstracts

Compatibility antioxidants represent a specialized class of additives formulated to stabilize polymer blends and alloys by mitigating oxidative degradation that can lead to phase separation, loss of mechanical properties, or discoloration during processing and end-use. These antioxidants are engineered to be compatible with multiple polymer phases simultaneously?such as polyethylene and polypropylene in polyolefin blends or engineering plastics like polycarbonate and ABS?ensuring uniform distribution and effective radical scavenging or hydroperoxide decomposition across heterogeneous systems. Their functionality often relies on molecular structures that balance polarity and solubility parameters to avoid migration or blooming, thereby preserving interfacial adhesion and overall material integrity in multicomponent polymer applications.

The global Compatibility Antioxidants market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
