Abstracts

Complex fertilizers have better physical, chemical, and mechanical properties compared to regular fertilizers. They offer a wider variety of options and can be customized to satisfy demand in accordance with specific soil compositions. Complex fertilizers are nutrient specific. Thus, for supplying a particular nutrient, one can select a specific chemical fertilizer. On the basis of form, the complex fertilizers market is segmented into solid and liquid fertilizers. The solid segment accounted for more than half of the total form market in 2016. Since it is a low-cost technique compared to the Others techniques (such as fertigation), it is economical to use it on low-cost cereals such as wheat and corn, which are the major crop types dominating the complex fertilizers market.

The global Complex Fertilizers market size was estimated at USD 43650.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.04% during the forecast period.
