Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Composite Bipolar Plate for Fuel Cell competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A composite bipolar plate is a promising alternative to graphite, and has the advantages of low cost, ease in machining, good corrosion resistance and lightweight. In recent years, composite bipolar plates have combined the advantages of graphite bipolar plates and metal bipolar plates, and have good electrical conductivity, mechanical strength, corrosion resistance, good processing performance and low cost, becoming the research focus of fuel cell bipolar plate materials. Currently used composite bipolar plates include carbon-based composite bipolar plates and metal-based composite bipolar plates. Although the electrical conductivity and thermal conductivity of composite bipolar plates are lower than those of pure graphite and metal bipolar plates, by optimizing the composite material composition, ratio and forming process, the performance of the prepared bipolar plates can still meet the use requirements of PEMFCs. Carbon-based composite bipolar plates can adjust the electrical conductivity and mechanical strength of bipolar plates according to the ratio of conductive fillers and resins, and can also be mass-produced by molding or injection molding, which reduces the manufacturing cost of bipolar plates. The research focus is to select suitable conductive fillers and resins, improve the uniform mixing of carbon materials and resins, optimize the preparation process, and obtain composite bipolar plates with high electrical conductivity and excellent mechanical strength.

The global Composite Bipolar Plate for Fuel Cell market size was estimated at USD 55.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 25.60% during the forecast period.
