Report Overview

Composite jacket arrester is a kind of overvoltage protection device used in power system. It consists of a Metal Oxide Varistor (MOV) with a polymer jacket. The working principle of the composite jacket arrester is to use the characteristics of the metal oxide varistor. When the overvoltage occurs in the power system, the varistor will be turned on quickly, and the overvoltage will be introduced to the ground to protect the power equipment and system from overvoltage. damage. The polymer jacket is an important part of the composite jacket arrester, which plays the role of protection and insulation. The polymer jacket can prevent outside dust, moisture and pollutants from entering the interior of the arrester and keep the arrester working normally. At the same time, the polymer jacket also has good insulation properties, which can prevent electrical contact between the arrester and other equipment.
