Report Overview

A material made up of two or more constituent materials possessing varied physical or chemical properties and is different from individual components is known as a composite material. These composites are highly used in aerospace and defense, transportation, and wind energy applications. Hence, comprehensive testing is carried out on these materials with specific standards known as composite testing. Composite testing is widely used in aerospace & defense sector to evaluate the performance and structural applications. Major commercial aircraft manufacturers such as Airbus and Boeing have developed aircraft such as Airbus A350 and Boeing 787 that constitute almost 50% of the composites in their airframe structures. Aviation giants such as National Aeronautics and Space Administration (NASA) and SpaceX widely use composite testing due to resistance fatigue & corrosion and high stiffness-to-weight ratio.

The global Composite Material market size was estimated at USD 878.40 million in 2023 and is projected to reach USD 1106.67 million by 2032, exhibiting a CAGR of 2.60% during the forecast period.

North America Composite Material market size was estimated at USD 239.20 million in 2023, at a CAGR of 2.23% during the forecast period of 2024 through 2032.
