## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Composite Pin Insulator competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Composite pin insulator is an insulating device widely used in medium and low voltage overhead transmission and distribution lines, and is a type of composite insulator. It consists of a high-strength core rod (usually glass fiber reinforced epoxy resin), a silicone rubber shed skirt and metal end pieces, and the whole is formed into an integrated structure by crimping or gluing. The lower end of the pin insulator is a threaded or flange structure, which is convenient for fixed installation on the crossarm or pillar, so it is called "pin type". Compared with traditional porcelain or glass insulators, composite pin insulators have the advantages of light weight, strong anti-pollution flashover ability, good hydrophobicity, aging resistance, easy installation and good bending strength. It is especially suitable for harsh environments such as coastal areas, high pollution, cold, windy and sandy or high altitudes.

The global Composite Pin Insulator market size was estimated at USD 397.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
