Abstracts

A composite pressure vessel is used to store gases at a relatively higher pressure. The vessel is an important part of the industrial infrastructure for safe gas & liquid handling. Composite vessels not only weigh way less than steel and aluminum vessels but also improve performance, key factors driving their use in a variety of applications such as oil refineries, aerospace, defense, research, nuclear reactors, gas storage, and automotive. Characteristics, such as excellent corrosion resistance, high stiffness, high strength, and longer life cycles compared to metal cylinders, further give an impetus to the demand for composite pressure vessels.
