Report Overview

Composite resin, also known as dental filling material, is a tooth-colored restorative material used in dentistry to repair decayed, damaged, or cracked teeth. It is made from a combination of plastic and glass particles, which are chemically activated and hardened to form a strong, durable, and aesthetically pleasing restoration. Composite resin offers several advantages over traditional metal fillings, such as improved aesthetics, better adhesion to tooth structure, and reduced risk of tooth fracture. The material is available in various shades to match the natural color of the tooth, allowing for a more seamless and natural-looking restoration. Composite resin is commonly used for fillings, inlays, onlays, and veneers, and is suitable for both anterior and posterior teeth.
