Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Compostable Disposable Cup competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Compostable Disposable Cups production reached approximately 2,064 million units, with an average global market price of around US\$ 0.20 per unit. Compostable disposable cups are single-use beverage containers made from plant-based or biodegradable materials designed to naturally break down into non-toxic organic matter under composting conditions. Unlike conventional plastic or foam cups, which can persist in the environment for centuries, compostable cups are engineered to decompose within a specified timeframe, often in industrial composting facilities or sometimes in home composting setups. They are typically manufactured from renewable resources such as polylactic acid (PLA) derived from corn starch, bagasse (sugarcane fiber), bamboo fiber, or paper coated with compostable biopolymers. These cups are intended to reduce reliance on fossil fuel-based plastics, minimize environmental pollution, and support circular economy initiatives in the foodservice and packaging industries.

The global Compostable Disposable Cup market size was estimated at USD 413.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
