## Abstracts

Compound-based avalanche photodiodes (APDs) are a class of optoelectronic devices fabricated using semiconductor composite materials such as indium gallium arsenide (InGaAs), gallium arsenide (GaAs), etc. It works, when light irradiation to these composite materials, the initial photogenerated carriers (electron - cavity pair) in the high electric field under the action of sufficient energy, and semiconductor lattice collision, resulting in a new electron - cavity pairs, this process is repeated, the formation of an avalanche of carrier multiplication effect, so that the output of the photocurrent has been significantly amplified. APDs based on these composite materials are capable of realizing high sensitivity detection of weak optical signals, and are commonly used in optical communications, LIDAR and other fields that require high gain optical detection.
