Abstracts

Compressed air dusters, also known as canned air or gas dusters, are aerosol-based cleaning products designed to remove dust, debris, and particulate matter from sensitive electronic equipment, intricate machinery, and hard-to-reach surfaces without physical contact or risk of damage. These devices utilize compressed, liquefied gases—typically difluoroethane, tetrafluoroethane, or other non-flammable, low-moisture propellants—to generate a high-velocity stream of air that dislodges contaminants from keyboards, circuit boards, cameras, laboratory instruments, and other precision devices where traditional cleaning methods are impractical or hazardous.

The global Compressed Air Dusters market size was estimated at USD 1240.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.85% during the forecast period.
