Abstracts

Compressed air leak detection is the process of identifying and locating leaks in compressed air systems to improve efficiency, reduce energy costs, and prevent equipment wear. Leaks can occur in pipes, valves, fittings, and connections, often resulting in significant energy waste and increased operational costs. Advanced detection methods include ultrasonic leak detectors, which pick up high-frequency sounds produced by escaping air, and thermal imaging cameras, which detect temperature changes caused by leaks. Regularly monitoring and addressing compressed air leaks ensures optimized system performance, prolongs equipment life, and supports sustainable operations by reducing unnecessary energy consumption.

The global Compressed Air Leak Detection market size was estimated at USD 1190.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
