Report Overview

Compressed natural gas (CNG) (methane stored at high pressure) is a fuel which can be used in place of gasoline , diesel fuel and propane/LPG. CNG combustion produces fewer undesirable gases than the fuels mentioned above. It is safer than other fuels in the event of a spill, because natural gas is lighter than air and disperses quickly when released. Biomethane - cleaned up biogas from anaerobic digestion or landfills - can be used.

In recent years, the share of natural gas in the global energy mix has drastically increased. The compressed natural gas (CNG) is used widely in heavy duty transportation vehicles due to affordability and eco-friendliness. With the rise in the environmental issues such as climatic changes and depleting ozone layer many nations across the globe have started using CNG in power production.

The Global Compressed Natural Gas Market Size was estimated at USD 40314.30 million in 2021 and is projected to reach USD 60282.34 million by 2028, exhibiting a CAGR of 5.92% during the forecast period.
