## Abstracts

Compressor Plate Valves are an essential component of a compressor system. They are flat - shaped valves, usually made of metal or high - performance polymers. These valves play a crucial role in the compression cycle of a compressor. They control the flow of refrigerant (in the case of a refrigeration or air - conditioning compressor) or gas (in industrial gas compressors) into and out of the compression chamber. The plate valves open and close in a precise sequence to allow the intake of the working fluid during the suction stroke and to release the compressed fluid during the discharge stroke, ensuring the efficient operation of the compressor and the proper transfer of energy to the fluid being compressed.

The global Compressor Plate Valves market size was estimated at USD 153.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.90% during the forecast period.
