Abstracts

Compressor remanufacturing refers to the process of professionally repairing or upgrading compressors that have reached the end of their service life or are no longer used due to functional damage, technical obsolescence, etc., with the aim of making their quality characteristics and safety and environmental performance not less than or even better than the original new product. Remanufactured compressors can save 30%-50% in costs. Against the backdrop of slowing economic growth and widespread pressure on enterprises to reduce costs and increase efficiency, this has become the most direct attraction. From a national strategic perspective, remanufacturing reduces reliance on primary mineral resources (such as steel, copper, and rare earths), helping to ensure national resource security and supply chain resilience. The petrochemical and mining/metallurgical industries are major electricity consumers of compressors, with equipment operating continuously under heavy loads, resulting in a huge demand for equipment upgrades. Remanufacturing not only provides equipment but can also be combined with new technologies such as permanent magnet variable frequency drives and two-stage compression for energy-saving retrofits, creating a vast market potential. As the capillaries of the economy, the large number of small and medium-sized manufacturing enterprises are cost-sensitive customers and ideal target groups for remanufactured compressors. In processes such as lithium battery manufacturing and photovoltaic crystal pulling, large quantities of oil-free, clean compressed air are required. These newly commissioned projects are also beginning to consider certified remanufactured compressors when selecting equipment. The remanufacturing and re-repair market for compressors used in braking and control systems is steadily increasing with the growth in the number of compressors in use.

The global Compressor Remanufacturing market size was estimated at USD 695.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of

3.20% during the forecast period.
