### Report Overview

Computed Radiography (CR) Detector is a digital imaging technique used to acquire and process X-ray images. It works by passing X-ray radiation through a substance called a scintillation screen, which converts it into light, which is then focused onto a light-sensitive detector using an optical system. The detector converts light into electrical signals, which are converted into digital signals by an AD converter, and then sent to a computer for processing and display. CR detectors can be used in fields such as medical diagnosis, industrial inspection and safety inspection.
