Report Overview

The Computer on Module (CoM), which is sometimes referred to as a System on Module, is an alternative to single board computers for embedded systems offering a more flexible and contoured solution. It is designed to plug into a carrier, or base board, and is generally a small processor module with a CPU and standard I/O capability. The complex effort associated with designing a CPU subsystem is avoided by using CoM functionality and a custom base board. A Computer on Module (COM) offers a unique approach to product development and the often fully custom electronics typically contained within sophisticated devices. A CoM helps system designers realize a fully customized electronics assembly, complete with custom interfaces and form factor without the effort of a ground-up electronics design.

The major players in global Computer On Module (COM) market include Kontron, Congatec, Advantech, etc. The top 3 players occupy about 25% shares of the global market. Europe and North America are main markets, they occupy about 80% of the global market. ARM Architecture is the main type, with a share about 60%.
