Abstracts

Concealed Fastening Panel is a metal panel system for construction, where fasteners are designed to be hidden in the panel joints or underlying structure, resulting in a clean-looking surface with no obvious fixing points. This type of panel is usually made of high-strength metal materials such as galvanized steel, aluminum or copper, and can be coated with color or anti-corrosion coatings to enhance durability and aesthetics. Concealed fastening panels are widely used in roof and exterior wall designs for their elegant appearance, excellent waterproof performance and high wind resistance. This system is installed through a special interlocking or locking connection method, making the fasteners completely invisible, combining functionality and decorativeness.

The global Concealed Fastening Panel market size was estimated at USD 713.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
