Abstracts

Concentrated solar power (also called concentrating solar power, concentrated solar thermal, and CSP) systems generate solar power by using mirrors or lenses to concentrate a large area of sunlight, or solar thermal energy, onto a small area. CSP even though is an old technology has not seen any big advancements in terms of innovation. Scalability and Complex operations have always restrained the adoption of this system, these factors have redirected the investments to PV systems which can be employed anywhere. But high cost and need for around the clock solar power is helping CSP technology grow at a fast pace.
