Abstracts

Concrete accelerating admixture is a kind of chemical additive which is added to concrete during the mixing process. Its main function is to significantly shorten the setting time of concrete, enabling the concrete to quickly solidify and harden. It works by promoting the hydration reaction of cement, accelerating the formation of hydration products, and thus increasing the early strength of concrete. This type of admixture is usually used in projects where rapid hardening and early strength gain of concrete are required, such as shotcrete construction in tunnels, slope protection projects, and emergency repair works. It can improve construction efficiency, reduce construction time and costs, and play a crucial role in ensuring the quality and safety of projects under specific conditions.

The global Concrete Accelerating Admixture market size was estimated at USD 5854.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.
