Abstracts

Concrete expansive agents are chemical admixtures added to concrete during mixing to induce controlled expansion, compensating for drying shrinkage and thermal contraction, thereby reducing the risk of cracking, improving durability, and ensuring long-term structural integrity in applications such as slabs, pavements, water-retaining structures, and prestressed concrete. These agents function through chemical reactions?commonly involving calcium sulfoaluminate, lime, or metallic powders?that generate expansive compounds like ettringite or hydrogen gas, exerting internal pressure to counteract shrinkage forces. The market encompasses various product types, including shrinkage-compensating and self-stressing agents, tailored to specific performance requirements, installation conditions, and environmental factors, with formulations designed to comply with international standards for safety, compatibility, and effectiveness in diverse concrete mix designs.

The global Concrete Expansive Agents market size was estimated at USD 2800.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
