Abstracts

Concrete placing booms are truck-mounted articulated robotic arms with a series of hollow-bore sections, designed to precisely deliver liquid concrete to specific locations on construction sites, particularly in high-rise buildings, large-scale infrastructure projects, and confined spaces where traditional methods like cranes or conveyor belts are impractical or inefficient. These systems consist of a series of articulating sections, typically made of steel or aluminum, which are hydraulically controlled and connected to a pump unit, allowing operators to maneuver the boom remotely and place concrete with high accuracy, reducing labor requirements and minimizing material waste while improving worksite safety by keeping personnel away from wet concrete and congested pour areas.

The global Concrete Placing Booms market size was estimated at USD 1250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.25% during the forecast period.
