Abstracts

Concrete release agents, also known as form release agents or form oil, are chemical formulations applied to the surfaces of molds, forms, or formwork prior to pouring concrete to prevent adhesion between the hardened concrete and the mold material. These agents facilitate clean and efficient demolding, preserving the integrity and surface finish of the concrete structure while protecting the formwork from damage or residue buildup. They are categorized into barrier-type (often oil-based, creating a physical film) and reactive-type (chemically active, forming a layer that minimizes bonding), with modern formulations increasingly emphasizing water-based, biodegradable, or solvent-free options to meet environmental and safety regulations.

The global Concrete Release Agent market size was estimated at USD 450.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
