Report Overview

The concrete scanning equipment is mainly used to detect the distribution, diameter, trend of reinforcing steel bar and the thickness of concrete cover in the concrete structure of engineering buildings. The concrete scanner can measure the position and distribution of steel bar, the thickness of concrete cover and the diameter of steel bar on the concrete surface. In addition, the concrete scanner can also detect the position of the magnetic and conductive body in the concrete structure, such as cables in the wall, plumbing pipes, etc. , pre-construction detection can effectively avoid the damage of these facilities during construction and reduce the occurrence of accidents. Concrete scanner is an effective tool for construction process monitoring and quality inspection.
