Report Overview

Surface deactivators are applied to fresh concrete to chemically delay the set of the surface mortar. Unlike concrete set deactivators, they allow the rest of the concrete to cure normally, without affecting the setting rate or strength gain. Because surface deactivators work their magic by stopping the hydration process down to a controlled depth, the underlying concrete will harden properly while allowing easy removal of the surface paste later. When you are ready to expose the aggregate by hosing or high-pressure washing, the depth of aggregate reveal is more uniform with minimal pop-outs.

The global Concrete Surface Deactivators market size was estimated at USD 280.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
